### **DETAILED ACTION**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action (paper of 6/24/09). The rejection still applies to claims 1, 2, 7-9, and 12, as amended. Patent 7,357,836 discloses supports that do not contain alumina, as disclosed in previous Office action (see column 7, lines 50-54; column 7, lines 55-column 8, lines 44), e.g. metal support, such as stainless steel; alloys, zirconia, silica, etc.

### ***Response to Arguments***

Applicant's arguments filed 9/23/09 have been fully considered but they are not persuasive. The support on patent '836 is not limited to gamma alumina. Because the support material is not required to have separation properties, the skilled artisan at the time this invention was made would have been motivated to select conventional supports for zeolite membranes and further provide sufficient bonding between the support and the membrane layer. Selecting the properties of the membrane layer of patent 7,252,876 to obtain a membrane with suitable isomeric butenes separation properties would have been obvious to the skilled artisan at the time this invention was made.

Applicant further argues that the support selection improves membrane selectivity for 1-butene with respect to 2-butenes and C8 hydrocarbon; however, those limitations are not part of the claims. It is also unclear whether that result is a consequence of the variation of the support, or the variation on the silicon/aluminum ratio of MFI zeolite. For these reasons the rejection above is maintained.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
